

### **Case scenario**

Miss.A is a 24-year-old woman psychiatric clinic comes to the because her mother, to whom she was very close, died 1 month ago, and since that time she has felt sad “all the time” and been very tearful. She also notes that she has gained 20 lb without trying to. She notes that she does not take pleasure in the activities that she once enjoyed. She also notes that she can’t sleep well because of thinking and worrying. the patient told his family that he was “sorry for all the pain and suffering I have caused you” and that “it would be better if I were not around anymore.”. These symptoms have caused the patient to withdraw from many of the social functions that she once enjoyed. She reported suicidal ideations without intent or plan. It is described for her Zoloft twice per day and ECT.

### **In the light of this situation answer the following questions:**

1. Identify the psychiatric signs and symptoms from the above mentioned situation and **define each**?
2. List two nursing diagnoses for patient’s problems mentioned in the situation according to priority of nursing actions?
3. Develop the appropriate plan of action for each nursing diagnosis and select the most appropriate principles?
4. Mention the criteria of recreational activities that might be used with the patient later?
5. Mention the medication group of “**Zoloft**” and its specific side effects?
6. Mention how you can prepare your patient for receiving ECT sessions?

**Good luck**
